Eur. Cytokine Netw. 11:372-378(2000).
-I- FUNCTION: Participates in the innate immune response to microbial agents. Acts via MyD88 and TRAF6, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             similarity).
--- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
--- TISSUE SPECIFICITY: Detected in brain, placenta, spleen, stomach, small intestine, lung and in plasmacytoid pre-dendritic cells.
--- SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
--- SIMILARITY: CONTAINS 1 TIR DOMAIN.
--- SIMILARITY: CONTAINS 27 LEGGINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

-i- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-i- ALTERNATIVE PRODUCTS: AT LEAST 5 ISOFORMS; 1/A (SHOWN HERE), 2/B, 3, 4 AND 5; ARE PRODUCED BY ALTERNATIVE SPLICING.
-i- TISSUE SPECIFICITY: Highly expressed in spleen, lymph node, tonsil and peripheral blood leukocytes, specially in plasmacytoid predenditic cells. Levels are much lower in monocytes and CD11c+ immature dendritic cells. Also detected in lung and liver.
-i- SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
-i- SIMILARITY: CONTAINS 1 TIR DOMAIN.
-i- SIMILARITY: CONTAINS 26 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                  Takeshita F., Leifer C.A., Gursel I., Ishii K.J., Takeshita S., Gursel M., Klinman D.M.;

SINCIAR LOCATION: Type I membrane protein (By similarity).
SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).
TISSUE SPECIFICITY: Detected in brain, heart, lung, liver, placenta, in monocytes, and at lower levels in CD11c+ immature dendritic cells.
SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
SIMILARITY: CONTAINS 1 TIR DOMAIN.
SIMILARITY: CONTAINS 24 LEUCINE-RICH REPEATS (LRR).

MISCELLANBOUS: PLATELET ACTIVATION APPARENTLY INVOLVES DISRUPTION
OF THE MACROMOLECTULAR COMPLEX OF GP-IB WITH THE PLATELET
GLYCOPROTEIN IX (GP-IX) AND DISSOCIATION OF GP-IB FROM THE
ACTIN-BINDING PROTEIN.
MISCELLANBOUS: BINDING SITES FOR VON WILLEBRAND FACTOR AND
THROMBIN (THE LATTER SITE WITH UNKNOWN FUNCTION) ARE IN THE
AMINO-TERMINAL PART OF THE MOLECULE.
SIMILARITY: CONTAINS 6 LEUCINE-RICH REPEATS (LRR).

"In Genome Biol. 1:RESEARCH002.1-2.10(2000).

"In FUNCTION: Cooperates with MD-2 and CD14 to mediate the innate inmune response to bacterial lipopolyasccharide (LPS). Acts via MyD88. TIRAP and TRARÉ, leading to NF-Kappe-B activation, cytokine secretion and the inflammatory response (By similarity).

"In SUBJUTT: Belongs to the lipopolyasccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLRAP wis their respective TIR domains (By similarity).

"SUBJUTE LOCAPION: Type I membrane protein (By similarity).

"SUBJUTARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

"SIMILARITY: CONTAINS 20 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright. A SHOW FURNETE LINEAGE SITES, AND MUTAGENESIS OF ASN-320 AND ASN-373.

RA da Silva Correla J., Ulevitch R.J.;

Muchan Titloffold.

Thopolysaccharide receptor...;

J. Biol. Chem. 277:1845-1854(2002).

T. FUNCTION: Cooperates with MD-2 and CD14 to mediate the innate immune response to bacterial lipopolysaccharide (LPS). Acts via MyD88, TIRAP and TRAF6, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response.

T. SUBUNIT: Belongs to the lipopolysaccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLR4.

Binds MD-2 via the extracellular domain. Binds MyD88 and TIRAP via their respective TIR domains.

T. SUBCELLULAR LOCATION: Type I membrane protein.

T. SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. "Phylogenetic variation and polymorphism at the Toll-like receptor 4
"Phylogenetic variation and polymorphism at the Toll-like receptor 4
"In Genome Biol. 1:RESEARCH002.1-2.10(2000).

I. FUNKTION: Cooperates with MD-2 and CD14 to mediate the innate immune response to bacterial lipopolysaccharide (LPS). Acts via MyD88, TIRAP and TRAF6, leading to NF kappa B activation, cytokine secretion and the inflammatory response (By similarity).

Subunti Protein complex containing at least CD14, MD-2 and TLR4.

Elinds MD-2 via the extracellular domain. Binds MyD88 and TIRAP via their respective TIR domains (By similarity).

SUBULARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

SIMILARITY: CONTAINS 21 LECUINE RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.                                              -:- TISSUE SPECIFICITY: STRONGEST EXPRESSION IN SKELETAL MUSCLE WITH HIGH EXPRESSION ALSO IN THE HEART AND LUNG.
-:- DISRESSE: THIS PROTEIN IS ABSENT IN SMITH-MAGENIS SYNDROME (SMS), RELATIVELY COMMON MICRODELETION SYNDROME INVOLVING DEVELOPMENTAL REPARALITIES AND MENTAL RETARRATION.
-:- SIMILARITY: CONTAINS 5 GELSOLIN-IRE REPEATS (LRR).
Proc. Natl. Acad. Sci. U.S.A. 90:11386-11390(1993).
-1- FUNCTION: MAY PLAY A KEY ROLE IN EMBRYONIC CELLULARIZATION BY INTERACTING WITH BOTH THE CYTOSKELETON AND OTHER CELLULAR

RL J. Bacteriol. 183:4823-4838(2001).

C -: FUNCTION: Hydrolyzes D-tyrosyl-tRNA(Tyr) into D-tyrosine and free

CC OD-tyrosine (By similarity).

CC -: SUBCELLUAR LOCATION: Cytoplasmic (Probable).

CC -: SIMILARITY: BELONGS TO THE DTD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human adenovirus type 2.

"PLINCTION: THIS IS A KEY ENZYME OF PLANT METABOLISM CATALYZING THE FINSTREAT REACTION IN THE BIOSYNTHESIS FROM L-PHENYLADINE OF A WIDE VARIETY OF NATURAL PRODOVICYS BASED ON THE PHENYLADROPANE SKELETON.
C. !- PATALYZIC ACTIVITY: L-Phenylalanine = trans-cinnamate + NH(3).
C. !- SUBCELLULAR LOCATION: Cycoplasmic (Probable).
C. !- PTM: CONTAINS AN ACTIVE SITE 4-METHYLIDENE-IMIDAZOLE-5-ONE (MIO), WHICH IS PROMED AUTOCATALYZICALLY BY CYCLIZATION AND DEHYDRATION
C. OF RESIDUES ALA-SER-GLY (BY SIMILARITY).
C. !- SIMILARITY: BELONGS TO THE PAL / HISTIDASE FAMILY.

"Cooperation of Toll-like receptor 2 and 6 for cellular activation by soluble tuberculosis factor and Borreals burgdorferi outer surface.

"Cooperation of Toll-like receptor 2 and 6 for cellular activation by soluble tuberculosis factor and Borreals burgdorferi outer surface.

"To protein A lipoprotein: role of Toll-like receptor 2 signaling.";

"Immunol. 167:987-994(2001).

"Info pacterial and fungl. Acts via MyD88 and TRAF6, leading to response. Recognizes mycoplasmal macrophage-activating response. Recognizes mycoplasmal macrophage-activating ipopeptide-2kD (MALP-2), soluble tuberculosis factor (STF), phenol-soluble modulin (PSM) and B.burgdorferi outer surface.

"To Subcular A lipoprotein (OspA-1) cooperatively with TLR2.

"Subcular Rubs via their respective extracellular domains.

Binds MyD88 via their respective TRR domains (By Similarity).

"Subcular Rubs via their respective TRR domains (By Similarity).

TISSUE SPECIFICITY: Detected in monocytes, CD11c+ immature
fissue specificative plasmacytoid pre-dendritic cells, and dermal
microvessel endothelial cells.
SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
SIMILARITY: CONTAINS 1 TIR DOMAIN.
SIMILARITY: CONTAINS 13 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                              01-MAR-2002 (Rel. 41, Created)

-!- CATALYTIC ACTIVITY: ATP + L-isoleucine + tRNA(11e) • AMP + diphosphate + L-isoleucyl-tRNA(11e).

-!- COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).

-!- COFACTOR: MONOMER (BY SIMILARITY).

-!- SUBGELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.

                                                                                                                                                                                                                                                           -I- FUNCTION: DNA POLYMERASE III IS A COMPLEX, MULTICHAIN ENZYME RESPONSIBLE FOR MOST OF THE REPLICATIVE SYNTHESIS IN BACTERIA. THIS DNA POLYMERASE ALSO EXHIBITS 3' TO 5' EXONUCLEASE ACTIVITY. THE ALPHA CHAIN IS THE DNA POLYMERASE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                               SUBUNIT: CONTAINS A CORE (COMPOSED OF ALPHA, EPSILON, AND THETA CHAINS) THAT ASSOCIATES WITH A TAU SUBUNIT WHICH ALLOW THE CORE DIMERIZATION TO FORM THE POLIII' COMPLEX. POLIII' ASSOCIATES WITH THE GAMMA COMPLEX (COMPOSED OF CHAINS GAMMA, DELTA, DELTA', PSI, AND CHI) AND WITH THE BETA CHAIN (BY SIMILARIY).

SUBCELLULAR LOCATION: CYLOPLASMIC (BY SIMILARIY).

SIMILARITY: BELONGS TO DNA POLYMERASE TYPE-C FAMILY. DNAE
